

#	Before	After	Reason
1	Estimation of monthly mortality rates	Monthly mortality rates will not be included in the paper.	The monthly mortality rates did not add much on top of the patterns seen in the waves.
2	Reporting of number of vaccination doses at the start and end of waves 2-5	Only the percentage of follow-up time on each dose in waves 2-5 will be reported.	The percentage of follow-up time on each dose sufficiently and concisely depicted differences in vaccination uptake in population subgroups. Adding the number of doses at the start and end of each wave did not add much.
